

## SECTION 1 — IMPORT-READY SOURCE FILE

### AP World History: Modern Free-Response Practice Exam 1

APWH-SAQ1-001

Section: SAQ

Type: written

Unit: Unit 1 — The Global Tapestry

Period: c. 1200–1450

Theme: ECN — Economic Systems

Historical Reasoning: Mixed Historical Reasoning

Source Type: Secondary text source

Prompt:

Source 1: Historian Lin Wei, “Commercial Life in Song China,” modern historical interpretation, 2018.

“The Song period should be understood as a commercial transformation driven not only by rulers but also by merchants, farmers, artisans, and urban consumers. Expanding markets, paper money, printed materials, and growing cities encouraged people to participate in a more connected economy than earlier Chinese dynasties had experienced.”

Source 2: Historian Amelia Grant, “States and Markets in Medieval East Asia,” modern historical interpretation, 2021.

“Song China’s economy expanded because the state created conditions that made market growth possible. Government investment in transportation, tax collection, agricultural improvement, and examination-based administration gave merchants and producers a more stable framework in which to operate.”

- (a) Identify one difference between the two historians’ interpretations of economic change in Song China.
- (b) Describe one specific historical development in Song China that could be used to support one of the interpretations.
- (c) Explain one way economic developments in Song China were similar to or different from economic developments in another region during c. 1200–1450.

Scoring Guide:

Total Points: 3

- (a) 1 point: Identifies a clear difference between the interpretations, such as Source 1 emphasizing bottom-up commercial activity while Source 2 emphasizes state support and administrative structures.
- (b) 1 point: Describes a relevant Song development, such as paper money, Champa rice and agricultural expansion, urbanization, printing, merchant networks, internal waterways, or examination-based bureaucracy, and connects it to one interpretation.
- (c) 1 point: Explains a valid similarity or difference with another region, such as the Dar al-Islam, Swahili Coast, Indian Ocean world, Europe, or South Asia, using a specific economic development and a clear comparison.

Model Guidance:

A strong answer should not merely state that Song China “had trade.” It should explain whether

economic growth was driven more by social-commercial activity, state policy, or both. For part (c), the strongest responses name another region and compare a specific development, such as merchant diasporas, urban markets, trade routes, state infrastructure, or monetized exchange.

Expected Points:

3

APWH-SAQ1-002

Section: SAQ

Type: written

Unit: Unit 3 — Land-Based Empires

Period: c. 1450–1750

Theme: GOV — Governance

Historical Reasoning: Sourcing / POV / Purpose / Audience

Source Type: Primary text source

Prompt:

Source: Memorial from Chen Liang, provincial governor in Sichuan, to the Qing imperial court, Beijing, 1713. This excerpt is original but modeled on the style of early eighteenth-century Qing administrative memorials.

“The people of the newly registered districts have begun to submit grain taxes, but many families remain unsettled after years of disorder. I request permission to repair the roads used by the courier stations and to appoint clerks who can translate between local speech and the language of the banner officers. If Your Majesty grants temporary tax relief to the poorest households, they will see that the dynasty governs with benevolence. The garrisons must remain alert, yet harsh punishments alone cannot secure loyalty. Local scholars should be invited to assist in schools and ritual observances so that the people may learn the proper order of ruler and subject.”

(a) Identify the likely purpose of the governor’s memorial.

(b) Explain how the memorial reflects one challenge faced by land-based empires during c. 1450–1750.

(c) Explain one way the policies described in the memorial reflect broader methods used by land-based empires to maintain power.

Scoring Guide:

Total Points: 3

(a) 1 point: Identifies a plausible purpose, such as persuading the emperor to approve tax relief, infrastructure repair, translation, local cooperation, or a balanced policy of military control and benevolent rule.

(b) 1 point: Explains a relevant imperial challenge, such as governing diverse populations, integrating frontier regions, maintaining loyalty after conquest, collecting taxes, coordinating military and civilian administration, or managing linguistic and cultural differences.

(c) 1 point: Explains a broader method of imperial rule, such as using bureaucracy, military garrisons, infrastructure, tax policy, religious or ideological legitimacy, local elites, education, or cultural accommodation.

Model Guidance:

A strong response should use the source’s point of view and purpose. The governor is writing upward to the imperial court, so he has an incentive to present his recommendations as useful for order and loyalty. Strong answers connect the Qing example to wider land-based imperial strategies rather than treating the memorial as only a local problem.

Expected Points:

3

APWH-SAQ1-003

Section: SAQ

Type: written

Unit: Unit 6 — Consequences of Industrialization

Period: c. 1750–1900

Theme: TEC — Technology and Innovation

Historical Reasoning: Causation

Source Type: Non-text source

Prompt:

Source: Description of a colonial railway and telegraph map of India, produced by an engineering office in Calcutta, 1885.

The map shows thick railway lines connecting Bombay, Calcutta, and Madras to inland regions labeled “cotton,” “jute,” “wheat,” “coal,” and “military cantonments.” Telegraph lines run beside many of the railway routes. Major port cities are marked with large circles, while many rural districts away from export crops or troop stations have few or no railway connections. A legend states: “Railways completed, railways under construction, telegraph lines, principal export commodities, troop stations.”

- (a) Identify one economic purpose of the railway and telegraph network shown in the described map.
- (b) Explain how the map reflects the relationship between technology and imperialism during c. 1750–1900.
- (c) Explain one social or economic effect that railway and telegraph construction could have had on people living in colonized regions.

Scoring Guide:

Total Points: 3

- (a) 1 point: Identifies a valid economic purpose, such as moving raw materials to ports, linking export zones to global markets, transporting coal or commercial crops, reducing shipping time, or improving communication for trade.
- (b) 1 point: Explains that industrial technologies such as railways and telegraphs helped imperial states extract resources, coordinate administration, move troops, connect colonies to metropolitan economies, or strengthen political control.
- (c) 1 point: Explains a valid effect on colonized peoples, such as increased commercialization of agriculture, migration for labor, disruption of local economies, new employment opportunities, tighter colonial control, famine vulnerability due to export priorities, or expanded nationalist communication networks.

Model Guidance:

A strong response should treat the map as evidence of colonial priorities. The placement of railways near ports, crops, coal, and troop stations matters. Strong answers may also note that technologies could serve imperial extraction while unintentionally helping colonized people circulate ideas, organize politically, or migrate for work.

Expected Points:

3

APWH-DBQ1-001

Section: DBQ

Type: written

Unit: Unit 9 — Globalization

Period: c. 1900–present

Theme: ECN — Economic Systems

Historical Reasoning: Continuity and Change Over Time

Source Type: Seven-document set

Prompt:

Evaluate the extent to which newly independent and developing states used state planning and international economic connections to pursue economic development in the period from c. 1945 to 1980.

Document 1

Author/Origin/Year/Place: Planning Commission memorandum, Government of India, 1951, New Delhi.

Source Type: Government planning memorandum.

“The new republic cannot depend only on private merchants or foreign firms to build the foundations of national prosperity. Heavy industry, irrigation, electrical power, technical education, and transport must receive organized public investment. Political independence will remain incomplete if the country imports most machinery while exporting mainly agricultural goods. The state must guide development so that economic power serves national needs rather than colonial patterns.”

Sourcing cues: Written by state planners shortly after independence; emphasizes sovereignty, industrialization, and public-sector planning.

Document 2

Author/Origin/Year/Place: Speech by a Ghanaian cabinet minister at a public meeting on the Volta River development project, 1962, Accra.

Source Type: Political speech.

“We do not build the dam merely to produce electricity. We build it to prove that an African nation can command modern science for its own future. The aluminum plants, roads, schools, and farms connected to this project will train our people for industry. We welcome loans and technical assistance, but we must not exchange the flag of empire for the chains of permanent dependency.”

Sourcing cues: Public speech by a postcolonial government official; seeks popular support and frames development as national liberation.

Document 3

Author/Origin/Year/Place: Development loan summary compiled by an international bank office, 1955–1975.

Source Type: Plain-text data table.

Selected Development Loans, 1955–1975

| Region / Country | Main Project Type | Loan Purpose Listed |
|------------------|-------------------|---------------------|
|------------------|-------------------|---------------------|

|       |                            |                                |
|-------|----------------------------|--------------------------------|
| India | Steel and electrical power | Industrial capacity and energy |
|-------|----------------------------|--------------------------------|

|       |                   |                                          |
|-------|-------------------|------------------------------------------|
| Ghana | Hydroelectric dam | Power generation and aluminum production |
|-------|-------------------|------------------------------------------|

Brazil Highway construction Interior settlement and commodity transport  
Turkey Port modernization Export expansion and shipping efficiency  
Kenya Agricultural extension Cash-crop yields and rural credit  
Indonesia Irrigation and rice production Food supply and rural stabilization

Note on the table: Most loans required repayment in foreign currency. Several included foreign technical advisers and imported machinery.

Sourcing cues: International financial institution perspective; emphasizes project categories and repayment conditions rather than local social effects.

#### Document 4

Author/Origin/Year/Place: Editorial in a Mexican business magazine, 1968, Mexico City.

Source Type: Magazine editorial.

“Factories protected by high tariffs have multiplied in the capital, and many workers now earn wages in industries that did not exist a generation ago. Yet protection has also produced complacency. Some firms rely on government licenses instead of improving quality or lowering prices. If national industry is to survive, it must learn to compete rather than remain permanently sheltered behind customs walls.”

Sourcing cues: Urban business perspective; supports industrialization but criticizes inefficiency under import-substitution policies.

#### Document 5

Author/Origin/Year/Place: Described export-promotion poster issued by a South Korean trade agency, 1973, Seoul.

Source Type: Described poster.

The poster shows a factory worker in the foreground holding a spool of thread and a small radio. Behind the worker are cranes loading containers onto ships. A rising sun appears over a port, and an arrow points from the Korean peninsula toward markets labeled “Middle East,” “Europe,” and “North America.” The slogan reads: “Exports Build the Nation: Skill, Discipline, Growth.”

Sourcing cues: Government-linked promotional image; celebrates labor discipline, manufactured exports, and integration into global markets.

#### Document 6

Author/Origin/Year/Place: Field report by a Tanzanian cooperative organizer, 1975, Morogoro Region, Tanzania.

Source Type: Local administrative report.

“The new village has allowed us to place a school, clinic, and grain store within walking distance of most households. Communal fields are easier to organize when families live closer together. However, some farmers complain that the move separated them from ancestral plots and that crop quotas do not account for soil differences. The party instructor says patience is necessary because equality cannot be built in one season.”

Sourcing cues: Local official involved in implementing rural socialism; reports both state goals and local resistance.

## Document 7

Author/Origin/Year/Place: Report excerpt by a Caribbean labor federation representative to a regional economic conference, 1979, Kingston.

Source Type: Labor organization statement.

“Our governments speak of development, but too often the burden falls on workers when export prices decline and debt payments rise. Sugar, bauxite, bananas, and tourism bring foreign exchange, yet decisions about prices, shipping, hotels, and credit are made far from the people whose labor sustains them. Development must include wages, unions, housing, and food security, not only impressive figures in a minister’s report.”

Sourcing cues: Labor perspective from a small postcolonial economy; challenges elite or foreign-centered definitions of development.

### Scoring Guide:

Total Points: 7

Thesis / Claim — 1 point: Earns the point by making a historically defensible claim that evaluates the extent to which developing states used state planning and international economic connections to pursue development from c. 1945 to 1980. A strong thesis should establish a line of reasoning, such as arguing that states used planning to promote sovereignty and industrialization but remained constrained by debt, export dependency, foreign expertise, or local resistance.

Contextualization — 1 point: Earns the point by describing a broader historical context relevant to post-1945 development, such as decolonization, the Cold War, the legacy of colonial export economies, the creation of international financial institutions, postwar reconstruction, import-substitution industrialization, socialist planning, or the rise of newly independent states.

Evidence from the Documents — 2 points: Earns 1 point by accurately using the content of at least three documents to address the prompt. Earns 2 points by using at least six documents to support an argument about state planning, international finance, export promotion, dependency, social change, or local resistance.

Evidence Beyond the Documents — 1 point: Earns the point by using at least one specific piece of relevant outside evidence not found in the documents, such as the Non-Aligned Movement, Bandung Conference, the IMF, World Bank, dependency theory, import-substitution industrialization in Latin America, Nasser’s Egypt, Sukarno’s Indonesia, the Green Revolution, OPEC, structural adjustment debates, or export-led growth in East Asia.

Sourcing / Analysis of Documents — 1 point: Earns the point by explaining how or why the point of view, purpose, audience, or historical situation of at least three documents is relevant to the argument. Effective examples include explaining why government planners emphasized sovereignty, why an international bank table might understate social costs, why a poster would promote disciplined labor and exports, or why a labor federation would focus on wages and dependency.

Complexity — 1 point: Earns the point by demonstrating a more complex understanding of development after 1945. This may include explaining both successes and limitations, comparing different development strategies, showing how political independence did not always produce economic independence, or analyzing tensions between national planning, local communities, foreign capital, and global markets.

### Model Guidance:

A strong DBQ could argue that newly independent and developing states actively used planning, public investment, and international loans to overcome colonial economic patterns, but that these strategies produced uneven results. Documents 1, 2, and 6 can support arguments about state-led development and national sovereignty. Documents 3, 5, and 7 can support arguments about global market connections, debt, exports, and dependency. Document 4 offers a useful middle position by

recognizing industrial growth while criticizing protected inefficiency. Outside evidence could include import-substitution industrialization, the Non-Aligned Movement, dependency theory, OPEC, the Green Revolution, or Cold War aid competition. Strong sourcing might analyze the purpose of state speeches, the perspective of international lenders, or the social position of labor and local cooperative organizers.

Expected Points:

7

APWH-LEQ1-001

Section: LEQ

Type: written

Unit: Unit 4 — Transoceanic Interconnections

Period: c. 1450–1750

Theme: SIO — Social Interactions and Organization

Historical Reasoning: Continuity and Change Over Time

Source Type: Broad historical prompt with introductory statement

Prompt:

From c. 1450 to 1750, transoceanic expansion connected port cities, colonial societies, and inland production zones across the Atlantic, Pacific, and Indian Ocean worlds. These connections reshaped social hierarchies in some places while reinforcing older forms of status, labor, and identity in others.

Evaluate the extent to which transoceanic expansion changed social hierarchies in the period c. 1450 to 1750.

Scoring Guide:

Total Points: 6

Thesis / Claim — 1 point: Earns the point by making a historically defensible claim that evaluates the extent to which transoceanic expansion changed social hierarchies from c. 1450 to 1750. A strong thesis should establish a line of reasoning about change, continuity, or both.

Contextualization — 1 point: Earns the point by describing a broader context relevant to the prompt, such as European maritime expansion, the Columbian Exchange, plantation economies, coerced labor systems, missionary activity, maritime trading companies, gunpowder empires, or existing social hierarchies before 1450.

Evidence — 2 points: Earns 1 point by identifying at least two specific pieces of relevant evidence, such as castas in Spanish America, creole elites, enslaved Africans in plantation colonies, indigenous labor drafts, mixed-race communities, European merchant enclaves, Dutch or Portuguese trading posts, or coastal intermediaries. Earns 2 points by using at least two pieces of evidence to support an argument about how hierarchies changed or continued.

Historical Reasoning — 1 point: Earns the point by using continuity and change over time to explain the extent of transformation. A strong response should show both what changed, such as racialized colonial hierarchies or new merchant elites, and what continued, such as patriarchy, coerced labor, noble privilege, religious authority, or preexisting status distinctions.

Complexity — 1 point: Earns the point by demonstrating a nuanced understanding of social hierarchy in multiple regions or social groups. This may include explaining that transoceanic expansion produced dramatic changes in settler colonies and plantation zones while producing more limited or negotiated change in some Asian or African port societies, or showing how race, religion, class, gender, and labor status interacted.

Model Guidance:

A strong LEQ should avoid simply listing empires or trade goods. It should make a clear argument about social hierarchy. Useful evidence might include Spanish American casta systems, Portuguese

Brazil, Caribbean plantation slavery, indigenous labor obligations, creole elites, European trading-company officials, African coastal brokers, missionary communities, and mixed-race populations. The best responses will balance change and continuity, showing that transoceanic expansion created new racial and colonial hierarchies in some regions while also relying on older patterns of patriarchy, coerced labor, elite privilege, and religious authority.

Expected Points:

6

## SECTION 2 — SERIES DO-NOT-REPEAT BANK UPDATE — DO NOT IMPORT

### SERIES DO-NOT-REPEAT BANK UPDATE — APWH-FRQ1

- APWH-SAQ1-001: Unit 1 — The Global Tapestry; c. 1200–1450; East Asia / Song China with possible comparison to Dar al-Islam, Indian Ocean, Swahili Coast, Europe, or South Asia; secondary text source with two modern historians; source perspectives contrast bottom-up commercialization versus state-supported market growth; historical development is Song economic expansion, urbanization, paper money, printing, transport, and bureaucracy; reasoning path compares interpretations and connects evidence to economic causation; misconception targeted: Song economic growth was caused only by trade or only by government action.
- APWH-SAQ1-002: Unit 3 — Land-Based Empires; c. 1450–1750; Qing China / Sichuan frontier administration; primary text source styled as an imperial administrative memorial; source perspective is a provincial governor advising the imperial court; historical development is Qing consolidation through bureaucracy, tax policy, translation, infrastructure, garrisons, local elites, and ideological legitimacy; reasoning path focuses on POV, purpose, and imperial governance challenges; misconception targeted: land-based empires relied only on military force to maintain control.
- APWH-SAQ1-003: Unit 6 — Consequences of Industrialization; c. 1750–1900; South Asia / British India; non-text source type is described colonial railway and telegraph map; visual/data/map pattern links port cities, export crops, coal, troop stations, railways, and telegraph corridors; historical development is industrial technology supporting imperial extraction, administration, troop movement, and market integration; reasoning path is technological causation and social/economic effects; misconception targeted: railways in colonies were built only for modernization or public benefit.
- APWH-DBQ1-001: Unit 9 — Globalization; c. 1900–present; India, Ghana, Mexico, South Korea, Tanzania, Caribbean, and international development institutions; DBQ topic is post-1945 state planning and international economic connections in developing and newly independent states; document types include government memorandum, political speech, development loan table, business editorial, described export-promotion poster, local cooperative report, and labor federation statement; document perspectives include state planners, postcolonial leaders, international lenders, business critics, export-promotion officials, rural socialist organizers, and labor representatives; main argument paths include sovereignty through planning, industrialization, import substitution, export-led growth, debt dependency, local resistance, and uneven development; outside evidence possibilities include Non-Aligned Movement, IMF, World Bank, dependency theory, OPEC, Green Revolution, import-substitution industrialization, Cold War aid, and East Asian export-led growth; sourcing opportunities include purpose of state development rhetoric, limits of lender data, promotional nature of export posters, and labor critique of dependency.
- APWH-LEQ1-001: Unit 4 — Transoceanic Interconnections; c. 1450–1750; Atlantic, Pacific, and Indian Ocean worlds with possible evidence from Spanish America, Brazil, Caribbean plantation zones, African coastal societies, and Asian port cities; LEQ topic is transoceanic expansion and changes in social hierarchies; historical reasoning process is continuity and change over time; evidence categories include castas, creole elites, enslaved Africans, indigenous labor drafts, mixed-race communities, missionary activity, merchant enclaves, trading-company officials, and coastal

intermediaries; complexity path weighs dramatic changes in colonial plantation and settler societies against continuities in patriarchy, coerced labor, elite privilege, religious authority, and older status systems; misconception targeted: transoceanic expansion transformed all societies in the same way or produced only economic rather than social change.
