

SECTION 1 — IMPORT-READY SOURCE FILE

AP World History: Modern Free-Response Practice Exam 10

APWH-SAQ10-001

Section: SAQ

Type: written

Unit: Unit 2 — Networks of Exchange

Period: c. 1200–1450

Theme: TEC — Technology and Innovation

Historical Reasoning: Mixed Historical Reasoning

Source Type: Secondary text source

Prompt:

Source 1: Historian Lani Teva, “Navigation and Settlement in the Pacific,” modern historical interpretation, 2020.

“Polynesian expansion across the Pacific should be understood as a major technological and environmental achievement. Navigators used stars, winds, currents, bird patterns, and ocean swells to settle islands separated by vast distances. Their voyages connected people, crops, animals, and cultural traditions across one of the world’s largest oceanic regions.”

Source 2: Historian Mark Ellison, “Islands, Chiefs, and Adaptation,” modern historical interpretation, 2022.

“Long-distance voyaging was important, but Polynesian societies became durable because settlers adapted to very different island environments. Chiefs, kinship groups, ritual authority, agricultural terraces, fishing systems, and resource management allowed communities to survive after migration ended or became less frequent.”

- (a) Identify one difference between the two historians’ interpretations of Polynesian expansion.
- (b) Describe one specific historical development that could be used to support one of the interpretations.
- (c) Explain one way Polynesian exchange or settlement patterns during c. 1200–1450 were similar to or different from exchange or settlement patterns in another region during the same period.

Scoring Guide:

Total Points: 3

- (a) 1 point: Identifies a clear difference between the interpretations, such as Source 1 emphasizing oceanic navigation and long-distance connection while Source 2 emphasizes local adaptation, social organization, and environmental management after settlement.
- (b) 1 point: Describes a relevant development, such as double-hulled canoes, star navigation, settlement of New Zealand or Hawaii, movement of taro or breadfruit, kinship-based leadership, terraced agriculture, fishing systems, or ritual authority of chiefs.
- (c) 1 point: Explains a valid similarity or difference with another region, such as Indian Ocean trade, Norse Atlantic settlement, Southeast Asian maritime networks, trans-Saharan caravans, or Silk Road exchange, using specific evidence about technology, environment, migration, trade, or cultural transmission.

Model Guidance:

A strong answer should avoid treating Polynesian societies as isolated after settlement or as only

seafaring communities. The best responses explain both long-distance navigation and local environmental adaptation. For part (c), strong answers compare a specific feature, such as maritime technology, environmental knowledge, settlement patterns, or movement of crops and cultural practices.

Expected Points:

3

APWH-SAQ10-002

Section: SAQ

Type: written

Unit: Unit 3 — Land-Based Empires

Period: c. 1450–1750

Theme: GOV — Governance

Historical Reasoning: Sourcing / POV / Purpose / Audience

Source Type: Primary text source

Prompt:

Source: Report from a Russian frontier official in Tobolsk to the tsar’s chancery, 1689. This excerpt is original but modeled on early modern Russian administrative correspondence from Siberia.

“The winter road to the eastern forts remains difficult, and several local clans have delayed delivery of the fur tribute. Some say the hunters have moved farther into the forests; others complain that merchants take the best pelts before the collectors arrive. If more soldiers are sent, the tribute may be secured, but harsh treatment will drive people beyond our reach. We request interpreters, gifts for loyal elders, and stricter rules for private traders, so that the sovereign’s revenue may increase without disorder.”

(a) Identify the likely purpose of the report.

(b) Explain how the report reflects one challenge faced by land-based empires during c. 1450–1750.

(c) Explain one limitation of the source as evidence for the experiences of Indigenous peoples in Siberia.

Scoring Guide:

Total Points: 3

(a) 1 point: Identifies a plausible purpose, such as requesting soldiers, interpreters, gifts, regulation of private traders, improved tribute collection, or guidance for managing frontier peoples.

(b) 1 point: Explains a relevant imperial challenge, such as governing distant frontiers, collecting tribute, managing merchants, negotiating with local elites, using military power without provoking flight or resistance, or overcoming environmental and transportation difficulties.

(c) 1 point: Explains a valid limitation, such as the source representing a Russian official rather than Indigenous hunters, women, clan leaders, shamans, merchants, or captives; or noting that it frames Indigenous communities mainly as tribute subjects rather than as people with their own political and economic goals.

Model Guidance:

A strong response should use the author’s point of view as a frontier official concerned with revenue and order. The report shows that imperial expansion depended on negotiation as well as coercion. Strong answers should avoid assuming that Russian frontier control was simple or complete.

Expected Points:

3

APWH-SAQ10-003

Section: SAQ

Type: written

Unit: Unit 8 — Cold War and Decolonization

Period: c. 1900–present

Theme: SIO — Social Interactions and Organization

Historical Reasoning: Causation

Source Type: Non-text source

Prompt:

Source: Description of a protest photograph taken in Johannesburg, South Africa, 1985.

The photograph shows a crowd of Black South African students and workers marching past a line of police vehicles. Several signs read “End Pass Laws,” “Education Is Not a Crime,” and “Sanctions Now.” In the background are factory buildings and a wall painted with the words “Township Residents Demand Freedom.” A church leader stands near the front of the crowd holding a microphone.

- (a) Identify one goal of the protesters suggested by the described photograph.
- (b) Explain one cause of anti-apartheid protest in South Africa during the late twentieth century.
- (c) Explain one way the protest shown in the photograph reflected broader global pressures on apartheid South Africa.

Scoring Guide:

Total Points: 3

- (a) 1 point: Identifies a valid goal, such as ending pass laws, opposing racial segregation, demanding equal education, ending police repression, calling for sanctions, gaining political rights, or dismantling apartheid.
- (b) 1 point: Explains a valid cause of anti-apartheid protest, such as legal racial segregation, restrictions on movement, unequal education, township poverty, police violence, exclusion from political rights, labor exploitation, or resistance to white minority rule.
- (c) 1 point: Explains a broader global pressure, such as international sanctions, anti-apartheid solidarity movements, United Nations criticism, church activism, labor activism, consumer boycotts, Cold War debates over race and rights, or global media attention.

Model Guidance:

A strong response should interpret the photograph as evidence of both local resistance and global connection. The signs about pass laws and education point to domestic apartheid policies, while the call for sanctions points to international pressure. Strong answers should avoid treating apartheid as only a South African internal issue with no global context.

Expected Points:

3

APWH-DBQ10-001

Section: DBQ

Type: written

Unit: Unit 9 — Globalization

Period: c. 1900–present

Theme: ECN — Economic Systems

Historical Reasoning: Continuity and Change Over Time

Source Type: Seven-document set

Prompt:

Evaluate the extent to which resource nationalism changed global energy politics and economic relationships from c. 1950 to 1980.

Document 1

Author/Origin/Year/Place: Speech by a Venezuelan petroleum minister to a national economic council, 1959, Caracas.

Source Type: Government speech.

“For too long, oil beneath our soil has enriched foreign shareholders more reliably than Venezuelan schools, roads, and workers. We do not reject foreign expertise or markets, but concessions must serve the nation. A country that exports oil yet imports poverty has not achieved true sovereignty.”

Sourcing cues: Government minister from an oil-exporting state; links petroleum policy to sovereignty, development, and renegotiation of foreign concessions.

Document 2

Author/Origin/Year/Place: Statement from representatives of several oil-exporting governments after a meeting in Baghdad, 1960.

Source Type: Organization statement.

“Producer countries must consult one another when companies reduce posted prices or alter terms affecting national revenue. Petroleum is not merely a commodity; it is the principal income of many states. Cooperation among producers will allow governments to defend fair prices, stable revenue, and control over natural resources.”

Sourcing cues: Collective producer-state perspective; emphasizes cooperation against multinational oil company power.

Document 3

Author/Origin/Year/Place: Private letter from an executive of a multinational oil company to regional managers, 1968, London.

Source Type: Business letter.

“Several host governments now demand larger shares of revenue, local hiring, and participation in management. We must adapt where necessary, but excessive concessions risk encouraging similar demands elsewhere. Our advantage remains technical knowledge, refining capacity, shipping networks, and access to consumer markets.”

Sourcing cues: Corporate executive perspective; concerned about preserving company leverage while responding to resource nationalism.

Document 4

Author/Origin/Year/Place: Memorandum from a Nigerian petroleum official to the federal cabinet, 1972, Lagos.

Source Type: Government memorandum.

“Oil income offers the possibility of roads, universities, hospitals, and industrial projects, but it also increases regional competition over revenue. Foreign firms still control much technical knowledge, and rapid spending may import inflation rather than development. National participation in petroleum must be paired with training, planning, and accountability.”

Sourcing cues: Postcolonial state official; recognizes both opportunities and risks of oil revenue.

Document 5

Author/Origin/Year/Place: Energy price summary compiled by an international economic research office, 1960–1979.

Source Type: Plain-text data table.

Selected Oil Market Indicators, 1960–1979

Year Approximate Pattern in World Oil Markets

1960 Producer states begin coordinating over posted prices and revenue

1971 Several producer governments renegotiate company contracts

1973 Oil embargo and production decisions contribute to sharp price increases

1974 Importing countries face inflation, fuel shortages, and balance-of-payments pressure

1979 Political instability and supply concerns contribute to another major price shock

Note on the table: The report stated that oil-importing countries became more aware of their dependence on producer-state decisions.

Sourcing cues: International economic perspective; summarizes market shifts but does not show local social effects.

Document 6

Author/Origin/Year/Place: Description of a newspaper photograph, 1974, Tokyo.

Source Type: Described photograph.

The photograph shows office workers leaving a building with many lights turned off. A sign near the entrance reads “Save Energy for the Nation.” Nearby, commuters wait beside a crowded train platform while a newspaper headline announces higher fuel prices and reduced oil imports. The caption states: “The oil crisis reaches daily life.”

Sourcing cues: Urban consumer and importer-state perspective; shows how global energy politics affected ordinary routines in an industrial economy.

Document 7

Author/Origin/Year/Place: Statement by an Algerian trade union representative at a conference on national development, 1976, Algiers.

Source Type: Labor organization statement.

“National control over oil and gas is a victory only if workers and villages share in it. A flag over the refinery does not automatically bring housing, wages, or clean water. We support independence from foreign companies, but we also ask who controls the new state companies and whose labor builds the pipelines.”

Sourcing cues: Labor perspective within a postcolonial resource-exporting state; supports nationalization while questioning distribution and worker power.

Scoring Guide:

Total Points: 7

Thesis / Claim — 1 point: Earns the point by making a historically defensible claim that evaluates the extent to which resource nationalism changed global energy politics and economic relationships

from c. 1950 to 1980. A strong thesis should establish a line of reasoning, such as arguing that producer states gained leverage over multinational corporations and importing countries, but that technology, markets, internal inequality, and dependence on oil revenue limited the transformation. Contextualization — 1 point: Earns the point by describing a broader historical context relevant to resource nationalism, such as decolonization, postwar economic growth, multinational corporations, Cold War development, OPEC, postcolonial state-building, industrial dependence on petroleum, the Arab-Israeli conflict, or the rise of global commodity markets.

Evidence from the Documents — 2 points: Earns 1 point by accurately using the content of at least three documents to address the prompt. Earns 2 points by using at least six documents to support an argument about producer-state cooperation, renegotiated concessions, multinational company power, development planning, price shocks, importing-country vulnerability, or labor critiques of nationalization.

Evidence Beyond the Documents — 1 point: Earns the point by using at least one specific piece of relevant outside evidence not found in the documents, such as OPEC, the 1973 oil embargo, nationalization of oil in Mexico or Iran, the Seven Sisters oil companies, the Yom Kippur War, petrodollars, stagflation, North Sea oil, or import-substitution development strategies funded by oil revenue.

Sourcing / Analysis of Documents — 1 point: Earns the point by explaining how or why the point of view, purpose, audience, or historical situation of at least three documents is relevant to the argument. Effective examples include explaining why oil ministers framed petroleum as sovereignty, why producer-state statements emphasized collective action, why corporate executives worried about precedent, why importer photographs emphasized daily disruption, or why labor representatives supported national control while criticizing unequal distribution.

Complexity — 1 point: Earns the point by demonstrating a more complex understanding of resource nationalism. This may include explaining that producer states increased bargaining power without fully escaping global market dependence, that nationalization could strengthen states while not guaranteeing social equality, that importing countries remained powerful but vulnerable, or that oil politics connected postcolonial sovereignty, corporate power, labor, inflation, and Cold War development.

Model Guidance:

A strong DBQ could argue that resource nationalism significantly changed global energy politics by increasing the leverage of oil-producing states, encouraging producer cooperation, weakening older concession systems, and exposing importing countries to price shocks. Documents 1, 2, 4, and 7 support arguments about sovereignty, development, and national control. Document 3 shows multinational companies adapting while retaining technical and market power. Documents 5 and 6 show global price shocks and effects on importing societies. Outside evidence could include OPEC, the 1973 embargo, the Seven Sisters, the Yom Kippur War, petrodollars, stagflation, or oil nationalization in Mexico or Iran. Strong sourcing should compare producer governments, corporations, postcolonial officials, international analysts, consumers, and labor representatives.

Expected Points:

7

APWH-LEQ10-001

Section: LEQ

Type: written

Unit: Unit 5 — Revolutions

Period: c. 1900–present

Theme: GOV — Governance

Historical Reasoning: Comparison

Source Type: Broad historical prompt with introductory statement

Prompt:

In the early twentieth century, revolutionary movements challenged older political orders in several regions. In Mexico and China, revolutionaries opposed weak or discredited governments, foreign influence, unequal landholding, regional military power, and social hierarchies. Yet the revolutionary outcomes in the two countries differed in important ways.

Compare the causes of the Mexican Revolution and the Chinese Revolution of 1911.

Scoring Guide:

Total Points: 6

Thesis / Claim — 1 point: Earns the point by making a historically defensible claim that compares the causes of the Mexican Revolution and the Chinese Revolution of 1911. A strong thesis should identify a meaningful similarity and/or difference and establish a line of reasoning.

Contextualization — 1 point: Earns the point by describing a broader context relevant to early twentieth-century revolutions, such as imperialism, export economies, land inequality, modernization programs, nationalism, foreign investment, weakened monarchies or authoritarian governments, regionalism, railroads, military reform, or global circulation of republican ideas.

Evidence — 2 points: Earns 1 point by identifying at least two specific pieces of relevant evidence, such as the Porfirio Díaz regime, hacienda land concentration, foreign investment in Mexico, Francisco Madero, Emiliano Zapata, Pancho Villa, Qing decline, the 1911 Wuchang uprising, Sun Yat-sen, anti-Manchu nationalism, railway nationalization disputes, treaty ports, or reform failures after the Boxer crisis. Earns 2 points by using at least two pieces of evidence to support a comparison of causes.

Historical Reasoning — 1 point: Earns the point by using comparison to explain similarities and/or differences in revolutionary causes. Strong responses might compare land inequality and rural grievances in Mexico with anti-dynastic nationalism and reform failure in China, or compare resentment of foreign influence in both countries while explaining differences in monarchy, regional military power, and social base.

Complexity — 1 point: Earns the point by demonstrating a nuanced understanding of revolutionary causation. This may include explaining that both revolutions combined elite political opposition with broader social grievances, that foreign economic influence mattered differently in each case, that revolutionary unity was limited, or that overthrowing an old regime did not immediately resolve regionalism, land inequality, or political fragmentation.

Model Guidance:

A strong LEQ should compare Mexico and China directly rather than writing two separate summaries. Useful evidence for Mexico might include the Díaz regime, haciendas, foreign investment, Madero, Zapata, Villa, and rural land grievances. Useful evidence for China might include Qing weakness, anti-Manchu nationalism, Sun Yat-sen, the Wuchang uprising, railway disputes, treaty ports, and failed reforms. Strong answers should explain both similarities and differences, especially the role of land, nationalism, foreign influence, elite opposition, and weakened state authority.

Expected Points:

6

SECTION 2 — SERIES DO-NOT-REPEAT BANK UPDATE — DO NOT IMPORT

SERIES DO-NOT-REPEAT BANK UPDATE — APWH-FRQ10

· APWH-SAQ10-001: Unit 2 — Networks of Exchange; c. 1200–1450; Polynesian Pacific including Hawaii, New Zealand, wider Oceania, island environments, oceanic navigation, and settlement networks; secondary text source with two modern historians; source perspectives contrast long-distance navigation, stars, winds, currents, ocean swells, canoes, crops, animals, and cultural transmission with local adaptation, chiefs, kinship, ritual authority, agricultural terraces,

fishing systems, and resource management; historical development is Polynesian expansion, exchange, settlement, and environmental adaptation; reasoning path compares technological-oceanic movement with post-migration social and environmental durability; misconception targeted: Polynesian societies were isolated, technologically simple, or only seafaring without complex local adaptation.

· APWH-SAQ10-002: Unit 3 — Land-Based Empires; c. 1450–1750; Russian Empire / Siberian frontier, Tobolsk, fur tribute, eastern forts, Indigenous clans, private traders, interpreters, and gifts to elders; primary text source is an original Russian frontier official report to the tsar's chancery; source perspective is an imperial revenue and security official concerned with tribute, frontier logistics, and local negotiation; historical development is Russian eastward expansion, yasak-style fur tribute, frontier administration, and negotiated/coercive control over Indigenous communities; reasoning path focuses on purpose, frontier governance challenges, and limitations for Indigenous experiences; misconception targeted: Russian expansion across Siberia was automatic, peaceful, or based only on military conquest without negotiation and local resistance.

· APWH-SAQ10-003: Unit 8 — Cold War and Decolonization; c. 1900–present; South Africa / Johannesburg, apartheid, pass laws, township protest, education inequality, workers, students, police vehicles, church leadership, and sanctions campaigns; non-text source type is a described protest photograph; visual/data/map pattern includes protest signs, police vehicles, factory buildings, township freedom slogan, church leader with microphone, and “Sanctions Now” demand; historical development is anti-apartheid resistance, racial segregation, labor activism, education protest, religious leadership, and international sanctions pressure; reasoning path is causation and global contextualization of domestic protest; misconception targeted: apartheid ended only through internal government reform or only through foreign pressure rather than through interaction of local resistance and global activism.

· APWH-DBQ10-001: Unit 9 — Globalization; c. 1900–present; Venezuela, Baghdad producer-state coordination, multinational oil companies, Nigeria, Japan, Algeria, oil-importing industrial economies, and global petroleum markets; DBQ topic is resource nationalism changing global energy politics and economic relationships from c. 1950 to 1980; document types include petroleum minister speech, producer-state organization statement, multinational oil company executive letter, Nigerian petroleum memorandum, international oil market indicator table, described Tokyo energy-crisis photograph, and Algerian labor statement; document perspectives include oil-exporting governments, collective producer states, corporate executives, postcolonial development officials, international economic analysts, importing-country consumers, and labor representatives; main argument paths include sovereignty over natural resources, renegotiated concessions, producer cooperation, corporate adaptation, technical dependence, development planning, price shocks, importer vulnerability, labor distribution critiques, and limits of nationalization; outside evidence possibilities include OPEC, 1973 oil embargo, Seven Sisters, Yom Kippur War, Iranian or Mexican oil nationalization, petrodollars, stagflation, North Sea oil, and oil-funded development strategies; sourcing opportunities include ministerial sovereignty rhetoric, producer collective bargaining, corporate fear of precedent, postcolonial planning concerns, market table abstraction, importer daily-life disruption, and labor critique of state ownership.

· APWH-LEQ10-001: Unit 5 — Revolutions; c. 1900–present; Mexico and China in the early twentieth century, including Porfirian Mexico, Qing China, foreign investment, land inequality, railways, regional militarism, republicanism, and anti-dynastic nationalism; LEQ topic is comparing causes of the Mexican Revolution and the Chinese Revolution of 1911; historical reasoning process is comparison; evidence categories include Porfirio Díaz, haciendas, foreign investment in Mexico, Francisco Madero, Emiliano Zapata, Pancho Villa, Qing decline, Wuchang uprising, Sun Yat-sen, anti-Manchu nationalism, railway nationalization disputes, treaty ports, and failed late Qing reforms; complexity path compares elite opposition, rural land grievances, nationalism, foreign influence, state weakness, regional military power, and limited revolutionary unity while distinguishing Mexico's agrarian/social grievances from China's anti-dynastic and republican

reform crisis; misconception targeted: early twentieth-century revolutions had identical causes or simply replaced old rulers without deeper social, foreign, and regional pressures.
